

MITRE ATT&CK Framework

4/18/26

11:08 AM

- **Reconnaissance** Gather information about the target (same as Kill Chain).
- **Resource Development** Attacker builds or buys infrastructure/tools (domains, malware, accounts).
- **Initial Access** Get the first foothold (phishing, exploited vulnerability, etc.).
- **Execution** Run malicious code on the victim system.
- **Persistence** Maintain access even after reboot or user logoff.
- **Privilege Escalation** Gain higher-level permissions (local admin or domain admin).
- **Defense Evasion** Avoid detection (disable antivirus, clear logs, use living-off-the-land binaries).
- **Credential Access** Steal usernames, passwords, hashes, or tokens.
- **Discovery** Explore the environment (find files, network shares, users, systems).
- **Lateral Movement** Move from one compromised system to another inside the network.
- **Collection** Gather data of interest (files, keystrokes, screenshots).
- **Command and Control (C2)** Communicate with attacker's server for instructions.
- **Exfiltration** Steal data out of the network.
- **Impact** Achieve the final goal (ransomware, data destruction, disruption).
